## SCOPE

The conference will have oral and poster sessions covering topics such as those given below:

- Shape memory alloys
- Functional materials
- Electronic materials and devices
- Advanced ceramics
- Advanced composites
- Self-healing materials
- High temperature materials
- New energy materials
- Energy storage materials
- Additive manufacturing
- Biomaterials
- Nanomaterials and structures
- Advanced processing and joining techniques
- Hydrogen production, storage and applications

## PREAMBLE

The International Conference on Materials for Advanced Technology brings together the world's leading academic scholars, researchers, and industrialists to exchange and share information on all aspects of advancements in materials science and technology. In addition, the conference provides a premier interdisciplinary forum for researchers, practitioners, and educators to explore and discuss the most recent innovations, trends, and concerns as well as practical challenges encountered and solutions adopted in their respective fields.

In today's rapidly changing world of materials, there are many fascinating and ever-growing options. The understanding of such a wide variety of materials demand an interdisciplinary knowledge of disciplines such as materials science and engineering, mechanical engineering, physics, chemistry, biology and mathematics.

ICAMT will feature some of the world's leading experts as keynote speakers and poster presenters. These will inspire the researchers with an exposure to a variety of topics and provide opportunity for discussions with stalwarts of materials research
